

Haworth-it!

Haworth, Inc. announced that all U.S., Shanghai and Pune manufacturing facilities, as well as the company's global headquarters, have achieved zero waste to landfill status. Preliminary results show that Haworth's U.S. manufacturing facilities have gone from 4.6 million pounds of landfill waste in 2008 to zero in 2009.

"Haworth is extremely proud of this accomplishment but we also recognize that this is a sustainable journey," said John Mooney, Haworth Chief Financial Officer and executive sponsor of sustainability. "Zero waste to landfill is a bold step toward our zero waste goals – a concept that affects all aspects of our business."

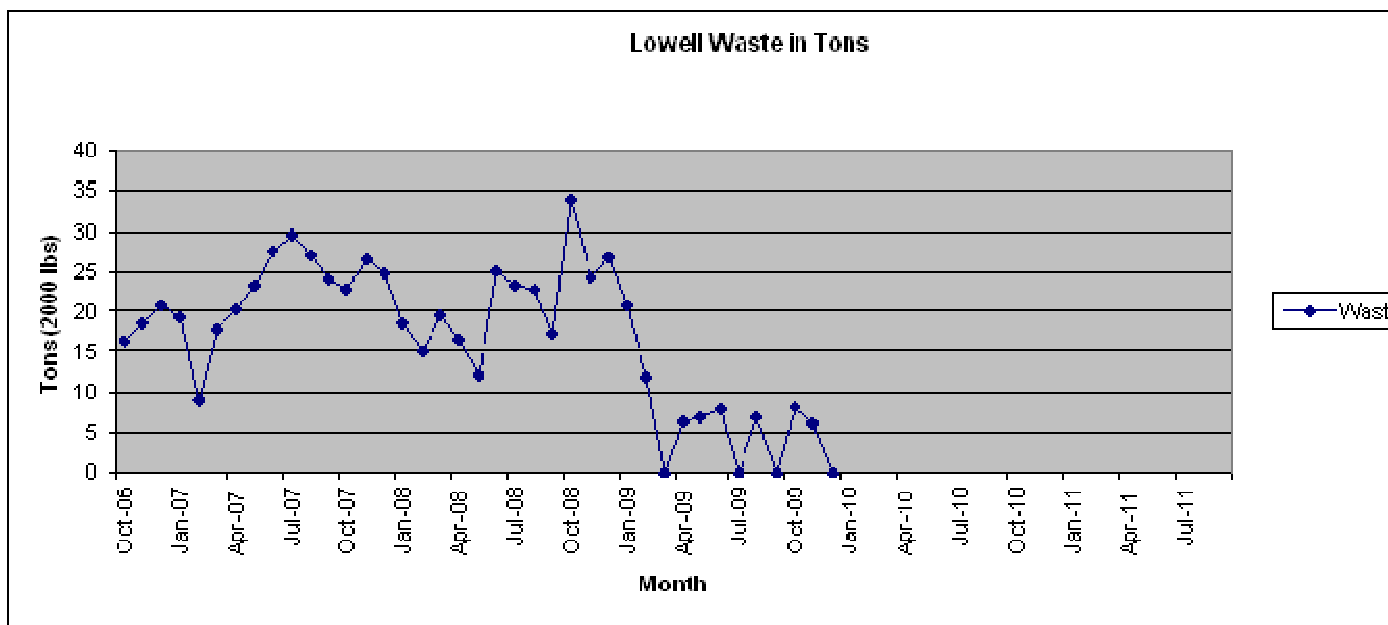

Haworth U.S. facilities still generate approximately .93 million pounds of waste that is turned into waste-to-energy. Global Haworth facilities that are not yet at zero waste to landfill status

will do so by 2011. Additional information on Haworth's sustainability initiatives can be found in the company's sustainability report.

I share this story with you so that everyone keeps in mind the goal that we are all striving for... **Zero Waste!** With the opening of our outlet store and our comprehensive recycling operations we have significantly reduced our total waste consumption and the costs associated with landfill fees. While we are not yet to the Zero Waste mark, we are headed toward that direction... and as you have read above, it is not as impossible as it may seem.

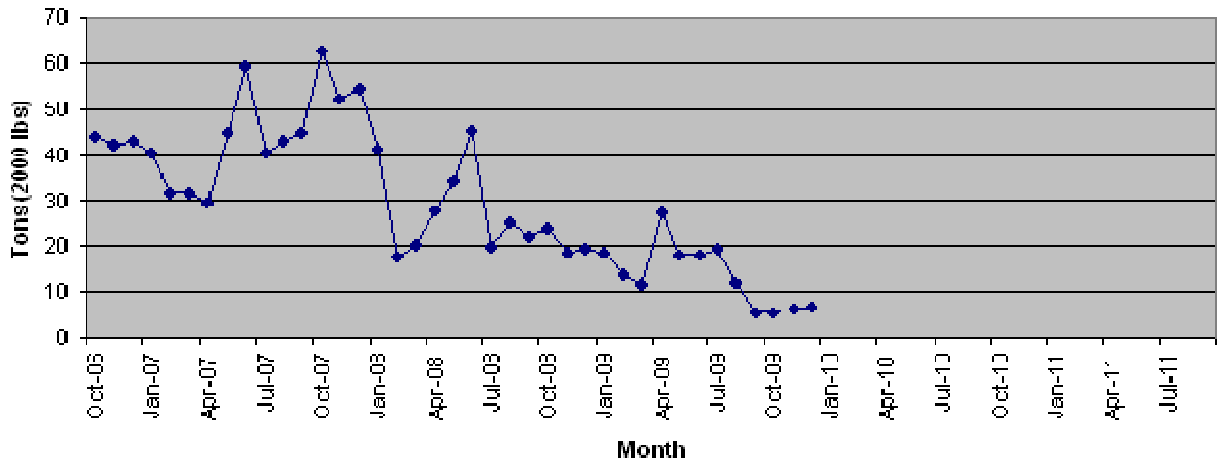

Check out the impact we have had on some of the waste being generated at our retail stores over the past year!
